STANDARDISATION							
EN 388 Mechanical Risks	abrasion resistance	blade cut resistance Coupe-Test	tear resistance	puncture resistance	blade cut resistance TDM-Test	impact test	4101X
Level	4	1	0	1	X	-	

EN 374-1	chemical	code letter	ISO 374-1/Type A
Chemical Risks	Methanol	A	
	n-Heptane	J	
EN 374-4	Sodium hydroxide 40%	K	
Degradation	Sulphuric Acid 96%	L	
	Nitric Acid 65%	M	
	Ammonium Hydroxide 25%	O	
	Hydrogen Peroxide 30%	P	
	Formaldehyde 37%	T	
EN 374-5 microorganism tightness	The glove is tight against microorganisms (viral, bacteria and fungi). Test according to ISO 16604 - method B.		<div>EN ISO 374-5:2016</div> <div></div> <div>VIRUS</div>

EN 420 protective gloves	The glove meets the requirements according to EN 420						
--------------------------	--	--	--	--	--	--	--

EN 455 medical gloves for single use	not applicable						
EN 455-1 freedom from holes	not applicable						

EN 16350 electrostatic properties	not applicable

Technical Data Sheet

Article-No.: **01160**
Description: **Clean Expert Nitril**
Nitrile glove
green, non sterile, powder free

WARNINGS AND SAFETY INFORMATION

storage / expiry date	Store gloves in original packaging in a cool and dry place without additional weight, protect from direct sunlight. Do not store near ozone sources (laser printers, copiers). The actual expiry time in use cannot be specified in general terms, as it depends on the general conditions of use. An individual risk assessment must be carried out in each case. The expiry date - valid for proper storage - is stated on the packaging.
use and control	Always use protective gloves only for the intended use and in the correct size. A check/risk assessment must be carried out to ensure that the gloves are suitable for the intended use, as the conditions at the workplace may deviate from those of the type test depending on temperature, abrasion and degradation. Breakthrough times and permeation levels are based on laboratory measurements and are determined using samples taken from the palm of the hand. The actual duration of protection of a glove with a specific substance can vary significantly due to the conditions of use (temperature, abrasion, stretching). In the case of aggressive chemicals, degradation (change in mechanical properties) can be an important factor to consider when selecting chemical-resistant gloves. This information does not reflect the actual duration of protection in the workplace and the distinction between mixtures and pure chemicals. The chemical resistance was determined under laboratory conditions only on the basis of samples from the palm and refers only to the chemicals tested. The situation may be different if the chemical is used in a mixture. The penetration resistance was evaluated under laboratory conditions and refers only to the tested specimen. The degradation results according to EN ISO 374-4 show the change in puncture resistance of the gloves after exposure to the tested chemical. Before use, the gloves must be checked for holes or damage.
disposal	Used gloves must be disposed of in accordance with the disposal regulations of the local waste disposal company. Unused gloves can be disposed of with household waste.
disinfection	Disinfection is not intended for these gloves and is the responsibility of the user.
warnings/ allergy information	Protective gloves are intended for single use only. This product contains dithiocarbamates, which may cause allergic reactions
donning and doffing instructions	

*slight deviations possible due to standard tolerances
