YES TO SKIN!

THE NITRILE PROTECTION AND MEDICAL EXAMINATION GLOVE WITH THE PATENTED LOW DERMA™ TECHNOLOGY.

- PREVENTATIVE AND SAFE PROTECTION FOR ALL SKIN TYPES
- ULTIMATE HAND PROTECTION SOLUTION
- ACCELERATOR FREE
- AS PURE AND CLEAN AS CRYSTAL

DISCOVER EXCEPTIONAL HAND PROTECTION.

DO YOU THINK YOU'VE CHOSEN THE RIGHT HAND PROTECTION?

I can't work without wearing gloves and my current hand allergy is getting worse and worse.

What do allergy sufferers think?

I've had to call in sick again because of my skin disorder. What can I do?

What's wrong with me? I'm itching everywhere and I've got hives all over my body.

Society frequently seems unaware of the factors that trigger off an allergy. It is widely believed that simply wearing gloves successfully prevents the problems surrounding allergies that are caused by irritants. Unfortunately this isn't the case, as certain allergens in the gloves can also cause dermatitis, such as type I (latex protein allergy) and type IV (delayed contact dermatitis). The causes of allergic reactions can be so complex that even changing from wearing latex gloves to nitrile gloves can exclude the possibility of type I over-sensitivity, the type IV over-sensitivity remains. For many allergy-prone wearers of gloves, this presents a major challenge. Moreover, there is also a risk of people who are yet to have suffered allergies developing hypersensitivities due to repeated exposure to allergens in gloves. And after the allergy has been triggered, people can suffer from it for the rest of their life. Preventing exposure to allergens is therefore the best way to prevent skin allergies.

"You're not alone! Skin disorders are the number one occupational illness"

Despite a wide range of preventative efforts and strategies, in terms of health complaints arising in the world of work, occupational skin disorders remain highly relevant. Half of all skin disorders are suffered by people who work in the area of healthcare. The consequences of occupational skin disorders are serious: in Germany, the employers' liability insurance associations and the accident insurance agencies in the public sector spent some 102.2 million Euros on services for the rehabilitation of skin disorders as well as associated pension payments in 2017. It is also necessary to take the social dimension into account. In many cases, particularly those of frequent relapse, an employee who suffers from a work-related skin disorder is forced to stop working and can even lose their job. Skin disorders aren't just associated with a significantly reduced quality of life

Skin disorders are one of the leading occupational illnesses

According to the latest information from the umbrella organisation of the German Statutory Accident Insurance Association (DGUV), some **21,063** cases of suspected occupational skin disorders were reported to the accident insurance agency in the year 2017. As recently reported by the Association of German Company Doctors (VDBW), this group of illnesses is therefore the leading reported occupational illness in Germany. Occupational skin disorders include severe or repeated cases of skin and hand eczema as well as allergic reactions.

Source: German Statutory Accident Insurance Association e.V. (DGUV), DGUV statistics for practice 2017, published October 2018.

for those who suffer from them, they are also a burden on employers and businesses due to the costs of lost working hours, and salary payments for workers on sick leave. They also present an indirect burden on the accident insurers due to the cost of pension payments, medical treatment, and retraining measures. Almost every area of the economy and industry, from manual work to the services sector, are affected. In this respect, the health and social care, food services, hairdressers, metalworkers, mechanics, retail dealers and workers in the construction sector are especially worthy of mention.

What's the solution?

The right kind of gloves! And you can find these in our range of products.

One of the latest developments from AMPri is the **EPIDERMPROTECT** accelerator-free LowDerma patented nitrile protection and medical examination glove by Med-Comfort. This glove is the best choice wherever sensitivity to the typical rubber accelerators or a TYPE IV contact dermatitis can be found.

Patented Technology

EPIDERMPROTECT BY MED-COMFORT

REDEFINE HAND PROTECTION.

With the use of the patented Low Derma technology, this glove offers the best hand protection in the area of the accelerator-free glove and is the perfect solution for sensitive skin. Here, people and their health come first.

What does the EPIDERMPROTECT by Med-Comfort stand for?

- **SAFE PROTECTION:** For all types of skin
- **COMPLETE CLEANLINESS:** The glove contains neither sulphur nor chemical accelerators such as thiuram, thiazoles or carbamat
- **ALLERGIES AND SENSITIVITIES:** Clinically tested – reduces type I and contact allergy type IV (late-type allergy with the delayed outbreak of the allergy)
- **NEW AREAS OF USE:** The glove can be used to handle materials that are reactive towards sulphur and other accelerators
- **GENTLE FORMULATION:** The glove doesn't distribute any allergens in the working environment (e.g. into open wounds)
- **RESPECT FOR THE ENVIRONMENT:** Due to the optimised manufacturing process, harmful chemical contents which cause long term damage to the environment due to pollution are sharply reduced or eliminated
- **SENSE OF RESPONSIBILITY:** The use of the PPE category III glove enables the user's skin to be protected against chemicals and exposure to sensitising substances which cause or trigger off allergic reactions
- **CONFIDENCE-BUILDING:** This product allows users of gloves who suffer from an allergy to accelerators, latex or other contact allergies to work without experiencing symptoms to the greatest possible extent. The glove is ideally used as preventive hand protection.

For whom has the EPIDERMPROTECT BY Med-Comfort been developed?
